

# Something Special Just My Size!

No longer little kids,  
But not yet teenagers—  
LS Jr. has the creative  
design forms to match  
preteens' size and  
vitality.

Strong construction  
with 16" seat  
height, 22" width,  
26" profile depth,  
fits fun seating  
groups for pre-  
teens into school,  
healthcare, sports  
and recreation  
centers, just like the  
full size LS Series  
for their grown-up  
sisters and brothers.

# LS Jr.

*Shown above: Groups of three 3431-10 chair segments facing in opposite directions, divided by a rectangular table.*

*At right: Three inward 3431-10 and three outward 3441-10 chair segments in a continuous group for a smaller space.*

*Front Cover: Back to back 3431-10 inward and 3441-14 outward chair segments form a sculptural room divider.*

## True radius chair segments create free flowing spaces

LS Jr. chair segments add a new dimension to designing reading, study and activity areas for children. Curved groups can divide open spaces or set aside a small area for reading and discussion. Separate the chairs or combine any number—they can be easily rearranged for activities.

*Designed with kids in mind™*

LS Jr. offers features to meet children's special needs:

- Sturdy frames that won't tip over
- Comfortable, well supported seating
- The underside of each chair is completely covered and secure
- Removable covers allow you to change them for cleaning or replacement.

*Shown above: Designtex fabric "Jungle Gym" upholstery covers, with corner tables in all laminate.*

### Spice it up!

LS Jr. chairs and sofas dress up in style in bold patterns just like the grown-up's LS Series.

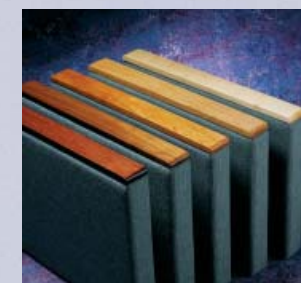

Matching benches, end arms and tables complete the series.

End arms may be used with all chairs and sofas, upholstered for a softer look or finished with arm caps in laminate or hardwoods.

Tables come in a variety of sizes, shapes and finishes. Center corner, 22" width, 30° segment, circular shapes may be finished in all laminate or with upholstered sides plus a top in laminate colors or a variety of solid hardwoods.

*Laminate arm caps may be color coordinated to the upholstery fabric on chairs, sofas or segments.*

*Solid hardwood arm caps may be selected from oak, maple, walnut, cherry or mahogany woods.*

*Table tops in matching laminate colors or solid hardwoods are replaceable on site for refinishing or repair.*

# Design Features

LS Jr. has a very strong construction, from its solid hardwood and hardwood plywood frame and its high resiliency foams (CA 117), to its triple stitched cover and heavy duty hardware. Each piece is built to give lasting performance in appearance and structure.

## Replaceable Covers

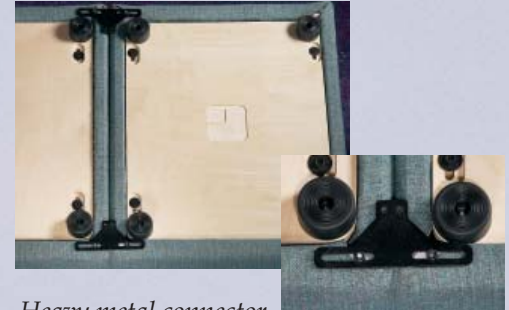

Chair, sofa and segment covers fit their forms in the same way. The seam between seat and back is held down into the frame by the seat casing; the four outside edges are held smoothly by velcro closures. Order extra covers to change on site, keeping the seating fresh and ready for usage at all times.

## Glides

All glides are leveler glides. Standard are hard plastic; optional non-skid glides are available for smooth tile or hardwood floors.

## Connectors

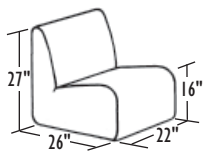

Heavy metal connector plates offer the option of connecting all of the rectangular and segment units. Connectors attach to units in place at the front and back with bolts into insert nuts in the frames.

# Design Forms To Fit Your Plans

AutoCAD symbols and floor plan typicals are available to expedite your specifications.
