

**Baxter Bioscience**  
 Thousand Oaks, California

The Linn® Series seating turns an angular building space into a smooth flowing reception area. Seating for fourteen people winds along the window walls, combining inward and outward chair segments from eleven to thirteen foot diameters into a continuous sculptural form.

Upholstered in black leather, each chair can stand alone or fit smoothly next to any other unit, for complete flexibility in plan. For larger scale, higher seating the client has chosen to use the Linn® Series "FF" fully upholstered frames on "PB" plinth bases.

Non-skid leveler glides and plinth base connectors keep each chair neatly in place on the ceramic tile floor
