

Weiler Engineering Elgin, Illinois

At once impressive and welcoming, this reception area reflects a unique company. The curved entry is highlighted by a staircase soaring to the next floor, echoed by a curved reception desk and planters. Laurel Series special diameter seating matches the circular arcs and provides a comfortable waiting area.

Special diameter chair and table segments to fit their lobby plan were provided on AutoCAD by August Inc.

Special sizes are available in many area seating series, making it possible to fit architectural spaces with all the features and options of August area seating systems

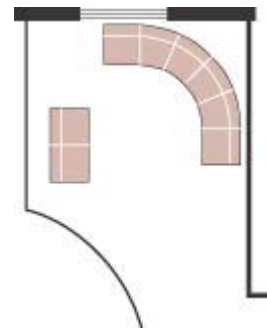

Weiler Engineering

Upper Reception Area

Laurel Series in a bold pattern fabric turns the second floor front area into a friendly lounge. The chairs and segments reflect the curves of the lobby, but may be arranged into various floor plans to fit the way they develop the space.

Design lines of the custom steel stairway continue along the second floor, repeating the circular lines and defining the edge of the balcony overlooking the atrium entrance.

All standard and special diameter seating segments feature true radius curved fronts and backs. They even may be used back to back in circle arcs.

Full size templates are available to verify the fit of chair segments to walls and to guide construction of walls, planters and floor designs.

Freedom of design.
Service to completion.
