

Billings, Montana
Deaconess Billings Clinic

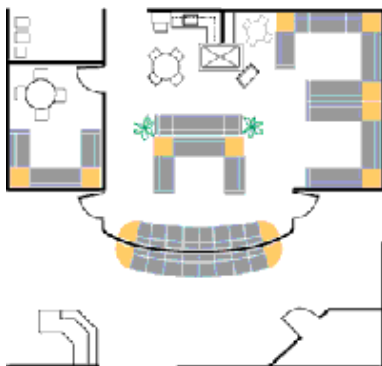

Big people, little people, quiet places, fun spaces —everyone's trip for medical care is more pleasant at Deaconess Billings Clinic.

Back to back special 31 ft. full size and 33 ft circle radius kids size chair segments divide adolescent and children's well waiting areas, and fit the TV room wall across the way.

Laurel Series full size (blue) and Laurel Jr. (red) match the flowing lines of each area with bright, soft seating for each age group.

Sick kids have their own space, where they can watch the fish tank, perched on Laurel Jr. benches.

A gently curved entry wall with special 68 ft. diameter inward and outward chairs on both sides softens the entry to the ICU waiting area.

Full size templates sent to the site before construction of the wall verified the special chairs' fit before production.

In the atrium connecting the new wing to the Clinic, standard Laurel 13 ft. diameter segments make sculptural islands of seating.
