without risk to designer or dealer!*

Solariums in unique circular window walls on three floors create cheerful lounges for family waiting, patient visiting and patient rehabilitation. A custom installation with all of the features of the standard Laurel Series seating was achieved by using special size chair segments fit into each window niche, with tables sized to each divider column between the chair segments. Full size templates for each Solarium were cut from the AutoCAD floor plans, assembled and checked at August Inc., shown at right. Templates were then sent to be checked on the building site. Site check revealed variations in divider walls of the three solariums. New templates based upon site photos and measurements lead to the final fit.
